**I. AMENDMENTS TO THE CLAIMS:**

The following listing of the claims replaces all prior versions and listing of the claims in the application:

1. (Currently Amended) A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket including an elongated body with a longitudinal axis, a first portion of the first bracket being pivotally connected to the first side rail of the frame in a fixed position;

a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the first leg and the table top when the first leg is in the extended position, the first leg being at least substantially spaced apart from the first side rail when the first leg is in the collapsed position;

a second bracket including an elongated body with a longitudinal axis, a first portion of the second bracket being pivotally connected to the first side rail of the frame in a fixed position;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top, at

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

least a portion of the first side rail being generally disposed between the second leg and the table top when the second leg is in the extended position, the second leg being at least substantially spaced apart from the first side rail when the second leg is in the collapsed position;

a third bracket including an elongated body with a longitudinal axis, a first portion of the third bracket being pivotally connected to the second side rail of the frame in a fixed position;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the third leg and the table top when the third leg is in the extended position, the third leg being at least substantially spaced apart from the second side rail when the third leg is in the collapsed position;

a fourth bracket including an elongated body with a longitudinal axis, a first portion of the fourth bracket being pivotally connected to the second side rail of the frame in a fixed position; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the fourth leg and the table top when the fourth leg is in the extended position, the fourth leg being at least

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

substantially spaced apart from the second side rail when the fourth leg is in the collapsed position;

wherein the elongated body of the first bracket is disposed generally parallel to and at least substantially proximate to the first side rail when the first leg is in the extended position, the elongated body of the first bracket being generally disposed at an angle and spaced part from the first side rail when the first leg is in the collapsed position;

wherein the elongated body of the second bracket is generally disposed parallel to and at least substantially proximate to the first side rail when the second leg is in the extended position, the elongated body of the second bracket being generally disposed at an angle and spaced part from the first side rail when the second leg is in the collapsed position;

wherein the elongated body of the third bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the third leg is in the extended position, the elongated body of the third bracket being generally disposed at an angle and spaced part from the second side rail when the third leg is in the collapsed position; and

wherein the elongated body of the fourth bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the fourth leg is in the extended position, the elongated body of the fourth bracket being generally disposed at an angle and spaced part from generally disposed at an angle and spaced part from the second side rail when the fourth leg is in the collapsed position.

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

2. (Original) The table as in Claim 1, wherein the first side rail is rotatably connected to the table top and the second side rail is rotatably connected to the table top.

3. (Previously Presented) The table as in Claim 1, further comprising a first crossbar interconnecting the first bracket and the third bracket; and further comprising a second crossbar interconnecting the second bracket and the fourth bracket.

**Please cancel Claims 4 and 5.**

6. (Currently Amended) A table comprising:  
a table top;  
a frame secured to the table top, the frame including a first side rail and a second side  
rail;  
a first bracket including an elongated body with a longitudinal axis, a first portion of  
the first bracket being pivotally connected to the first side rail of the frame in a fixed  
position;  
a first leg connected to a second portion of the first bracket, the first leg movable  
between an extended position and a collapsed position relative to the table top, at least a  
portion of the first side rail being generally disposed between the first leg and the table top  
when the first leg is in the extended position;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

a second bracket including an elongated body with a longitudinal axis, a first portion of the second bracket being pivotally connected to the first side rail of the frame in a fixed position;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the second leg and the table top when the second leg is in the extended position;

a third bracket including an elongated body with a longitudinal axis, a first portion of the third bracket being pivotally connected to the second side rail of the frame in a fixed position;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the third leg and the table top when the third leg is in the extended position;

a fourth bracket including an elongated body with a longitudinal axis, a first portion of the fourth bracket being pivotally connected to the second side rail of the frame in a fixed position; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top, at

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

least a portion of the second side rail being generally disposed between the fourth leg and the table top when the fourth leg is in the extended position;

wherein the elongated body of the first bracket is disposed generally parallel to and at least substantially proximate to the first side rail when the first leg is in the extended position, the elongated body of the first bracket being generally disposed at an angle and spaced part from the first side rail when the first leg is in the collapsed position;

wherein the elongated body of the second bracket is generally disposed parallel to and at least substantially proximate to the first side rail when the second leg is in the extended position, the elongated body of the second bracket being generally disposed at an angle and spaced part from the first side rail when the second leg is in the collapsed position;

wherein the elongated body of the third bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the third leg is in the extended position, the elongated body of the third bracket being generally disposed at an angle and spaced part from the second side rail when the third leg is in the collapsed position; and

wherein the elongated body of the fourth bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the fourth leg is in the extended position, the elongated body of the fourth bracket being generally disposed at an angle and spaced part from the second side rail when the fourth leg is in the collapsed position; and The table as in Claim 1, further comprising

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

a drawer attached to the table top, ~~The table as in Claim 5,~~ wherein the first leg, the second leg, the third leg and the fourth leg are sized and configured to be disposed about the drawer when the legs are in the collapsed position.

7. (Original) The table as in Claim 1, further comprising a locking pin configured to secure the first leg member in an extended position.

8. (Currently Amended) A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket including an elongated body with a longitudinal axis, a first portion of the first bracket being pivotally connected to the first side rail of the frame in a fixed position;

a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the first leg and the table top when the first leg is in the extended position;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

a second bracket including an elongated body with a longitudinal axis, a first portion of the second bracket being pivotally connected to the first side rail of the frame in a fixed position;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the second leg and the table top when the second leg is in the extended position;

a third bracket including an elongated body with a longitudinal axis, a first portion of the third bracket being pivotally connected to the second side rail of the frame in a fixed position;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the third leg and the table top when the third leg is in the extended position;

a fourth bracket including an elongated body with a longitudinal axis, a first portion of the fourth bracket being pivotally connected to the second side rail of the frame in a fixed position; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top, at

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

least a portion of the second side rail being generally disposed between the fourth leg and the table top when the fourth leg is in the extended position;

wherein the elongated body of the first bracket is disposed generally parallel to and at least substantially proximate to the first side rail when the first leg is in the extended position, the elongated body of the first bracket being generally disposed at an angle and spaced part from the first side rail when the first leg is in the collapsed position;

wherein the elongated body of the second bracket is generally disposed parallel to and at least substantially proximate to the first side rail when the second leg is in the extended position, the elongated body of the second bracket being generally disposed at an angle and spaced part from the first side rail when the second leg is in the collapsed position;

wherein the elongated body of the third bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the third leg is in the extended position, the elongated body of the third bracket being generally disposed at an angle and spaced part from the second side rail when the third leg is in the collapsed position; and

wherein the elongated body of the fourth bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the fourth leg is in the extended position, the elongated body of the fourth bracket being generally disposed at an angle and spaced part from the second side rail when the fourth leg is in the collapsed position; The table as in Claim 1,

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

wherein the first bracket is attached to a portion of the first side rail that is spaced apart from an end of the first side rail and wherein the first leg is generally aligned with the end of the first side rail when the first leg is in the extended position.

**Please cancel Claim 9.**

10. (Currently Amended) A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket including an elongated body with a longitudinal axis, a first portion of the first bracket being pivotally connected to the first side rail of the frame in a fixed position;

a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the first leg and the table top when the first leg is in the extended position;

a second bracket including an elongated body with a longitudinal axis, a first portion of the second bracket being pivotally connected to the first side rail of the frame in a fixed position;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the second leg and the table top when the second leg is in the extended position;

a third bracket including an elongated body with a longitudinal axis, a first portion of the third bracket being pivotally connected to the second side rail of the frame in a fixed position;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the third leg and the table top when the third leg is in the extended position;

a fourth bracket including an elongated body with a longitudinal axis, a first portion of the fourth bracket being pivotally connected to the second side rail of the frame in a fixed position; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the fourth leg and the table top when the fourth leg is in the extended position;

wherein the elongated body of the first bracket is disposed generally parallel to and at least substantially proximate to the first side rail when the first leg is in the extended

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

position, the elongated body of the first bracket being generally disposed at an angle and spaced part from the first side rail when the first leg is in the collapsed position;

wherein the elongated body of the second bracket is generally disposed parallel to and at least substantially proximate to the first side rail when the second leg is in the extended position, the elongated body of the second bracket being generally disposed at an angle and spaced part from the first side rail when the second leg is in the collapsed position;

wherein the elongated body of the third bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the third leg is in the extended position, the elongated body of the third bracket being generally disposed at an angle and spaced part from the second side rail when the third leg is in the collapsed position; and

wherein the elongated body of the fourth bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the fourth leg is in the extended position, the elongated body of the fourth bracket being generally disposed at an angle and spaced part from the second side rail when the fourth leg is in the collapsed position; The table as in Claim 1,

wherein the first leg is generally parallel to and spaced apart from the first side rail when the first leg is in the collapsed position.

11. (Currently Amended) A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket including an elongated body with a longitudinal axis, a first portion of the first bracket being pivotally connected to the first side rail of the frame in a fixed position;

a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the first leg and the table top when the first leg is in the extended position;

a second bracket including an elongated body with a longitudinal axis, a first portion of the second bracket being pivotally connected to the first side rail of the frame in a fixed position;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the second leg and the table top when the second leg is in the extended position;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

a third bracket including an elongated body with a longitudinal axis, a first portion of the third bracket being pivotally connected to the second side rail of the frame in a fixed position;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the third leg and the table top when the third leg is in the extended position;

a fourth bracket including an elongated body with a longitudinal axis, a first portion of the fourth bracket being pivotally connected to the second side rail of the frame in a fixed position;

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the fourth leg and the table top when the fourth leg is in the extended position; ~~The table as in Claim 1, further comprising~~

a first link connecting the first side rail to the first bracket; ~~further comprising~~

a second link connecting the first side rail to the second bracket; ~~further comprising~~

a third link connecting the second side rail to the third bracket; and ~~further comprising~~

a fourth link connecting the second side rail to the fourth bracket;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

wherein the elongated body of the first bracket is disposed generally parallel to and at least substantially proximate to the first side rail when the first leg is in the extended position, the elongated body of the first bracket being generally disposed at an angle and spaced part from the first side rail when the first leg is in the collapsed position;

wherein the elongated body of the second bracket is generally disposed parallel to and at least substantially proximate to the first side rail when the second leg is in the extended position, the elongated body of the second bracket being generally disposed at an angle and spaced part from the first side rail when the second leg is in the collapsed position;

wherein the elongated body of the third bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the third leg is in the extended position, the elongated body of the third bracket being generally disposed at an angle and spaced part from the second side rail when the third leg is in the collapsed position; and

wherein the elongated body of the fourth bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the fourth leg is in the extended position, the elongated body of the fourth bracket being generally disposed at an angle and spaced part from the second side rail when the fourth leg is in the collapsed position.

12. (Previously Presented) The table as in Claim 11, further comprising a first pin that is inserted through an opening in the first bracket to secure the first leg in the extended position; further comprising a second pin that is inserted through an opening in the second bracket to secure

**Re.** : Response to Office Action Mailed August 17, 2005

the second leg in the extended position; further comprising a third pin that is inserted through an opening in the third bracket to secure the third leg in the extended position; and further comprising a fourth pin that is inserted through an opening in the fourth bracket to secure the fourth leg in the extended position.

13. (Original) The table as in Claim 1, further comprising one or more clips that attach the first side rail and the second side rail to the table top.

14. (Original) The table as in Claim 1, further comprising a first crossbar that interconnects the first side rail and the second side rail; and further comprising a second crossbar that interconnects the first side rail and the second side rail.

15. (Original) The table as in Claim 14, further comprising one or more clips that attach the first crossbar and the second crossbar to the table top.

16. (Original) The table as in Claim 1, wherein the first bracket can be pivoted relative to the table top to allow the first leg to be moved between the extended position and the collapsed position; and wherein the first bracket can be rotated relative to the table top to allow the first leg to be moved between a first position in which the first leg is spaced apart from an lower

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

surface of the table top and a second position in which the first leg is positioned generally adjacent to the lower surface of the table top.

17. (Original) The table as in Claim 1, wherein the first side rail can be rotated relative to the table top to allow the first leg to be spaced apart from a lower surface of the table top and to allow the first leg to be positioned generally proximate the lower surface of the table top.

18. (Original) The table as in Claim 17, further comprising a lever that may be used to secure the first side rail in a fixed position.

19. (Original) The table as in Claim 17, further comprising a knob that may be used to secure the first side rail in a fixed position.

20. (Currently Amended) A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket including an elongated body with a longitudinal axis, a first portion of the first bracket being pivotally connected to the first side rail of the frame in a fixed position;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566

a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the first leg and the table top when the first leg is in the extended position;

a second bracket including an elongated body with a longitudinal axis, a first portion of the second bracket being pivotally connected to the first side rail of the frame in a fixed position;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the first side rail being generally disposed between the second leg and the table top when the second leg is in the extended position;

a third bracket including an elongated body with a longitudinal axis, a first portion of the third bracket being pivotally connected to the second side rail of the frame in a fixed position;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the third leg and the table top when the third leg is in the extended position;

Re. : Response to Office Action Mailed August 17, 2005  
Appl. No. : 10/821,566  
Filed : April 9, 2004

a fourth bracket including an elongated body with a longitudinal axis, a first portion of the fourth bracket being pivotally connected to the second side rail of the frame in a fixed position; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top, at least a portion of the second side rail being generally disposed between the fourth leg and the table top when the fourth leg is in the extended position;

wherein the elongated body of the first bracket is disposed generally parallel to and at least substantially proximate to the first side rail when the first leg is in the extended position, the elongated body of the first bracket being generally disposed at an angle and spaced part from the first side rail when the first leg is in the collapsed position;

wherein the elongated body of the second bracket is generally disposed parallel to and at least substantially proximate to the first side rail when the second leg is in the extended position, the elongated body of the second bracket being generally disposed at an angle and spaced part from the first side rail when the second leg is in the collapsed position;

wherein the elongated body of the third bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the third leg is in the extended position, the elongated body of the third bracket being generally disposed at an angle and spaced part from the second side rail when the third leg is in the collapsed position;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

wherein the elongated body of the fourth bracket is generally disposed parallel to and at least substantially proximate to the second side rail when the fourth leg is in the extended position, the elongated body of the fourth bracket being generally disposed at an angle and spaced part from the second side rail when the fourth leg is in the collapsed position; The  
~~table as in Claim 1,~~

wherein a portion of the first side rail is disposed within the first bracket when the first leg is in the extended position;

wherein a portion of the first side rail is disposed within the second bracket when the second leg is in the extended position;

wherein a portion of the second side rail is disposed within the third bracket when the third leg is in the extended position; and

wherein a portion of the second side rail is disposed within the fourth bracket when the fourth leg is in the extended position.

21. (Previously Presented) A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket including a first portion pivotally connected to the first side rail of the frame;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top;

a second bracket including a first portion pivotally connected to the first side rail of the frame;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top;

a third bracket including a first portion pivotally connected to the second side rail of the frame;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top;

a fourth bracket including a first portion pivotally connected to the second side rail of the frame; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top;

wherein the first side rail is rotatably connected to the table top and the second side rail is rotatably connected to the table top.

22. (Previously Presented) The table as in Claim 21, further comprising a lever that may be used to secure the first side rail in a fixed position.

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566  
**Filed** : April 9, 2004

23. (Previously Presented) The table as in Claim 21, further comprising a knob that may be used to secure the first side rail in a fixed position.

24. (Previously Presented) The table as in Claim 21, wherein the first side rail can be rotated relative to the table top to allow the first leg to be spaced apart from a lower surface of the table top and to allow the first leg to be positioned generally proximate the lower surface of the table top.

25. (Previously Presented) The table as in Claim 24, further comprising means for securing the first side rail in a fixed position.

26. (Previously Presented) A table comprising:  
a table top;  
a frame secured to the table top, the frame including a first side rail and a second side rail;  
a first bracket including a first portion pivotally connected to the first side rail of the frame;  
a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top;

**Re.** : Response to Office Action Mailed August 17, 2005  
**Appl. No.** : 10/821,566

a second bracket including a first portion pivotally connected to the first side rail of the frame;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top;

a third bracket including a first portion pivotally connected to the second side rail of the frame;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top;

a fourth bracket including a first portion pivotally connected to the second side rail of the frame;

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top; and

one or more clips that attach the first side rail and the second side rail to the table top.

27. (Currently Amended) A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket including a first portion pivotally connected to the first side rail of the frame;

**Re.** : Response to Office Action Mailed August 17, 2005

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top, the third leg being disposed generally perpendicular to the second side rail and the third bracket being disposed generally parallel to the second side rail when the third leg is in the extended position, the third leg being disposed generally parallel to and at least substantially spaced apart from the second side rail when the third leg is in the collapsed position, the third bracket being disposed generally perpendicular to the second side rail when the third leg is in the collapsed position;

a fourth bracket including a first portion pivotally connected to the second side rail of the frame; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top, the fourth leg being disposed generally perpendicular to the second side rail and the fourth bracket being disposed generally parallel to the second side rail when the fourth leg is in the extended position, the fourth leg being disposed generally parallel to and at least substantially spaced apart from the second side rail when the fourth leg is in the collapsed position, the fourth bracket being disposed generally perpendicular to the second side rail when the fourth leg is in the collapsed position. ;

~~a first crossbar that interconnects the first side rail and the second side rail;~~

~~a second crossbar that interconnects the first side rail and the second side rail; and~~

~~one or more clips that attach the first crossbar and the second crossbar to the table top.~~

28. (Previously Presented) A table comprising:
- a table top;
  - a frame secured to the table top, the frame including a first side rail and a second side rail;
  - a first bracket including a first portion pivotally connected to the first side rail of the frame;
  - a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top;
  - a second bracket including a first portion pivotally connected to the first side rail of the frame;
  - a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top;
  - a third bracket including a first portion pivotally connected to the second side rail of the frame;
  - a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top;

a fourth bracket including a first portion pivotally connected to the second side rail of the frame; and

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top;

wherein the first side rail can be rotated relative to the table top to allow the first leg to be spaced apart from a lower surface of the table top and to allow the first leg to be positioned generally proximate the lower surface of the table top.

29. (Previously Presented) The table as in Claim 28, further comprising a lever that may be used to secure the first side rail in a fixed position.

30. (Previously Presented) The table as in Claim 28, further comprising a knob that may be used to secure the first side rail in a fixed position.

31. (Previously Presented) A table comprising:  
a table top;  
a frame secured to the table top, the frame including a first side rail and a second side rail;  
a first bracket including a first portion pivotally connected to the first side rail of the frame;

a first leg connected to a second portion of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top;

a second bracket including a first portion pivotally connected to the first side rail of the frame;

a second leg connected to a second portion of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top;

a third bracket including a first portion pivotally connected to the second side rail of the frame;

a third leg connected to a second portion of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top;

a fourth bracket including a first portion pivotally connected to the second side rail of the frame;

a fourth leg connected to a second portion of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top; and

a first pin that is sized and configured to be inserted into an opening in the first bracket and a first opening in the first side rail to secure the first leg in the extended position.

32. (Previously Presented) The table as in Claim 31, further comprising a second pin that is sized and configured to be inserted into an opening in the second bracket and a second opening in the first side rail to secure the second leg in the extended position, a third pin that is sized
